ART 34 AMDT

## CLAIMS

1. A color metallic pigment comprising metal particles and a single-layer or multilayer coat covering the surface of each said metal particle, wherein at least one  
5 layer of said single-layer or multilayer coat is a cobalt coat consisting of an anhydrous oxide film elementally containing cobalt.

2. The color metallic pigment according to claim 1, comprising a silicon-aluminum coat consisting of an oxide film elementally containing silicon and/or  
10 aluminum inside said cobalt coat.

3. The color metallic pigment according to claim 1, comprising a molybdenum-phosphorus coat consisting of an oxide film elementally containing molybdenum and/or phosphorus on the surface of each said metal particle.  
15

4. The color metallic pigment according to claim 1, comprising a second coat consisting of an oxide film or an oxynitride film containing at least one element selected from a group consisting of titanium, zirconium, zinc, iron, chromium and cerium outside said cobalt coat.  
20

5. The color metallic pigment according to claim 4, wherein said second coat consists of an oxide film or an oxynitride film elementally containing titanium.

6. The color metallic pigment according to claim 5, comprising a weather-resistant coat consisting of an oxide film containing at least one element selected from a  
25 group consisting of aluminum, silicon and cerium outside said second coat.

7. A resin composition containing the color metallic pigment according to claim 1 and resin.
